

Enhanced connectivity for Network Operating Systems

- Get the connectivity tools that match your Network Operating System environment
- Integrate your shared devices seamlessly into your Network Operating System
- Enable the full functionality of your networked output devices to be available to everyone

Connectivity – harnessing the full power of networked output devices

In today's atmosphere of heightened competition and more sophisticated customer demands, the sharing of key document resources across digital networks is improving the efficiency and productivity of businesses everywhere. Our new breed of advanced, printers and multifunctional products (MFPs) utilize the power of centralised management and access, to provide reliable and flexible document output solutions that will integrate seamlessly into your network environment.

Nashuatec's unique approach, links people with knowledge and expertise, combining our wide experience of innovative, document related Products and Software Solutions with our world class Business and Professional Services to deliver the best Total Document Solutions for your business.

TOTAL DOCUMENT SOLUTIONS

Specialised connectivity tools for Network Operating Systems

Ensuring optimum printing productivity and easy access to shared devices, whilst effectively managing costs, is a key goal for Network Administrators of all major operating systems. Cross-platform compatibility has become a burning issue for Apple Macintosh users, but there are indeed many compatibility factors to consider amongst the Windows, Novell and Citrix platforms, not least in the area of printer and MFP connectivity. For many connectivity tasks, Network Administrators need specialized tools compatible with popular Network Operating System environments. We have made the following software tools available to satisfy these needs.

PostScript and PCL Drivers for Microsoft Operating Systems

Microsoft test our PostScript and PCL drivers to ensure that they work effectively with Microsoft Operating Systems, such as XP and Office 2003.

Business benefits are:

- Advanced finishing options for professional quality documents
- Simple installation and configuration
- Hole-punching and stapling
- Total Cost of Ownership - duplex and toner saving
- Personal profiles for each user so that they can select their preferences

RPCS – driving efficient, user friendly Total Document Solutions

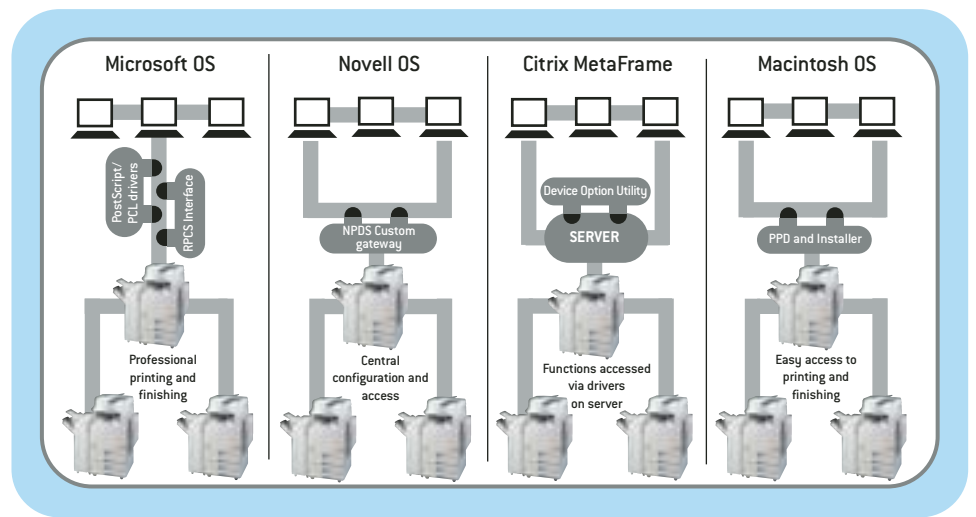

Our unique printer driver, Refined Printing Command Stream (RPCS), enables documents to be output in the format of your choice, in one click. Its easy to use Graphical User Interface uses icons to represent common or personal document output settings, utilizing the advanced finishing capabilities of our devices.

Novell Distributed Print Services (NDPS) Gateway

NDPS Gateway configures our printers and multifunctional products so that they are seamlessly integrated with Novell's NDPS architecture.

Business benefits are:

- Central configuration and access to all networked printing devices
- Automatic device discovery and downloadable drivers make the IT Administrator's life easier

- Configure event notification - for example users are notified when their print job is completed
- Network Administrator receives less helpdesk calls
- Eliminates need for complex print queue, printer object and print server management

DeviceOption Utility for Citrix MetaFrame

Businesses benefiting from the power of Citrix Metaframe's server-based computing are limited by MetaFrame's 'Auto-Create Client Printer' utility to the most basic functions of our hardware. To overcome this issue, we provide DeviceOption Utility for MetaFrame, which enables access to all our advanced options including duplex, stapling and hole-punching, additional paper trays and hard disk memory upgrades.

Business benefits are:

- Users can access all printer and MFP functions via drivers stored on the central server
- A single server/client installation saves time by making drivers available to everyone

Macintosh PPD and Installer

The Macintosh OS X platform generic printer drivers are not able to utilise some of the advanced finishing options available on our output devices. Mac OS PPD and Installer provides driver files for all our devices that make all finishing options readily available to Mac OS X users.

Business benefits are:

- Easy access to all our drivers for Macintosh OS X platform
- Enables the use of advanced printing and finishing options on our devices
- Easy and quick installation
- Multi-language support
- Simple drop-down menu for finishing options

Fast access via on-line downloads

To maximise productivity of your device in a Network Operating Systems environment and for further information and downloads, please visit our website or contact your local sales company:
